COUNTIES

**128**

ENDPOINTS

**128**

UPDATED

**2026-05-  
31**

---

Every entry is a working ArcGIS REST endpoint published by a US county or municipality. Each county lists the FeatureServer or MapServer URL, the layer name, the searchable fields the assessor actually exposes (owner name, parcel ID, site address), and the date the endpoint was last confirmed live.

This is the static snapshot. The live atlas at [urbankitstudio.com/parcel-atlas](https://urbankitstudio.com/parcel-atlas) is updated weekly and hands off any endpoint to the UrbanKit parcel lookup tool in one click.

# Help keep the atlas accurate.

## SUBMIT A COUNTY

### Know your county's REST URL?

Send the endpoint URL and a layer name to the contact form at [urbankitstudio.com/contact](https://urbankitstudio.com/contact). New entries are usually verified and published within a week. Counties that moved their GIS servers go to the front of the queue; broken URLs hurt downstream tooling.

## LIVE DATA

### Always-current source.

The live atlas at [urbankitstudio.com/parcel-atlas](https://urbankitstudio.com/parcel-atlas) is regenerated from the same source files used to build this PDF, plus weekly endpoint liveness checks. The PDF is a snapshot; the live atlas is the ground truth.

## CODE & DATA

### Open-source SDK and JSON.

The same county metadata powers [@urbankitstudio/atlas](https://github.com/urbankitstudio/atlas) on npm, a tiny JavaScript SDK with typed access to every county and endpoint in this directory. Atlas source JSON is also available at [github.com/leoyong/urbankitstudio](https://github.com/leoyong/urbankitstudio) under `public/data/atlas/`.

## TOOLS

### What to do with these URLs.

Paste any of these endpoints into the UrbanKit parcel lookup at [urbankitstudio.com/tools/parcel-lookup](https://urbankitstudio.com/tools/parcel-lookup) to query the layer directly in your browser. From there, hand off to Radius Notice for buffered owner mailing lists, or CSV to Avery 5160 for printable labels.
